Viewing data with the TatukGIS Viewer

Click on the Add Button (+)

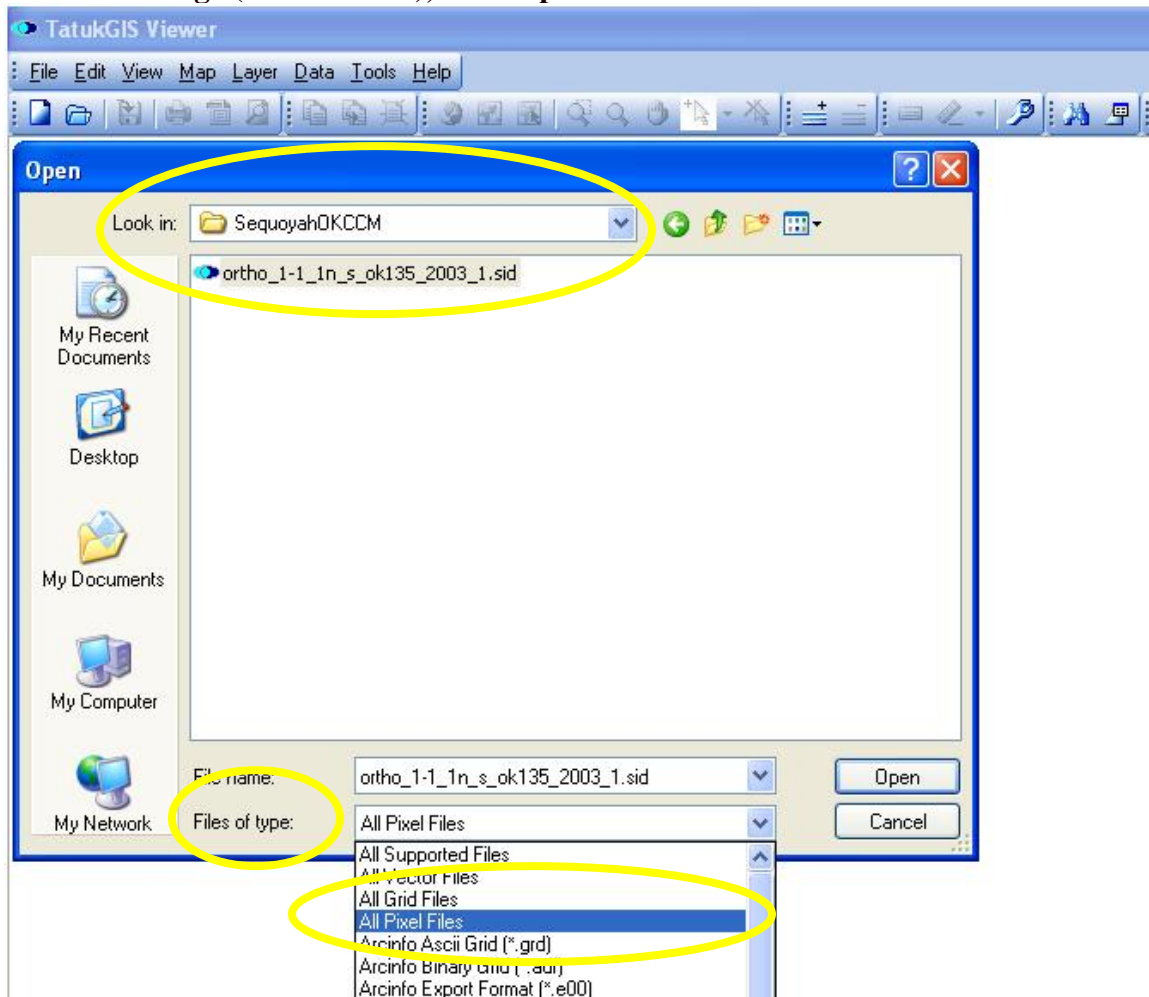

To view the imagery
Under "Files of type" select "All Pixel Files"
Navigate to the location of the data on the CD or computer.
Select the image (file name.sid), click Open.

## To view the index
Under "Files of type" select "All Supported Files"
Navigate to the location of the data on the CD or computer.
**Select the index (file name.shp), click Open.**

**To turn a data layer on or off check the box next to the layer name.**

To view the imagery under the index data layer double click on the index name.
**This will make it the active layer and open the Theme Properties menu.**

**Select Pattern, Transparent, Apply.**

To change the color and size of the index lines select Outline, enter a new number in the Width box, and select a color from the Color box. Click OK.
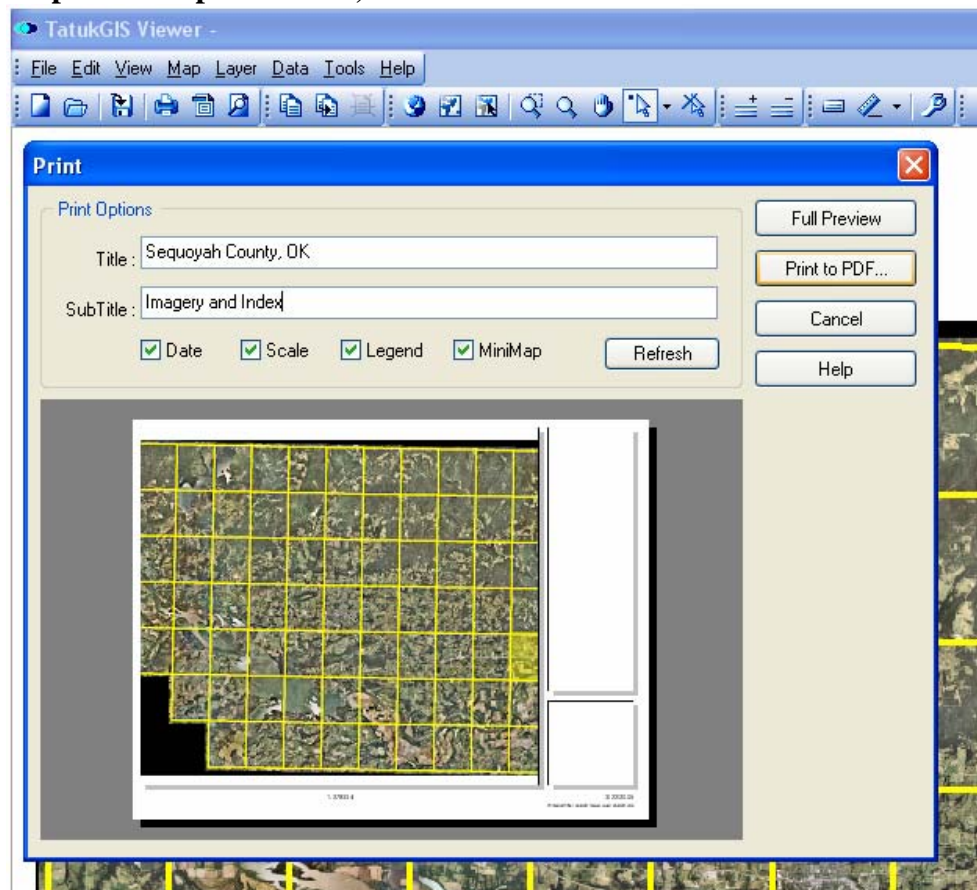

To zoom in on the imagery click on one of the magnifying glass buttons and select the area of interest. To move the image, click the hand button and while pressing the left mouse button move the image.

To view the index information click on the arrow button, choose Select by Point, and then click on the area of interest. The attribute information for that particular area will display on the upper right side of the screen. To get the information for other areas click on the particular area of interest.
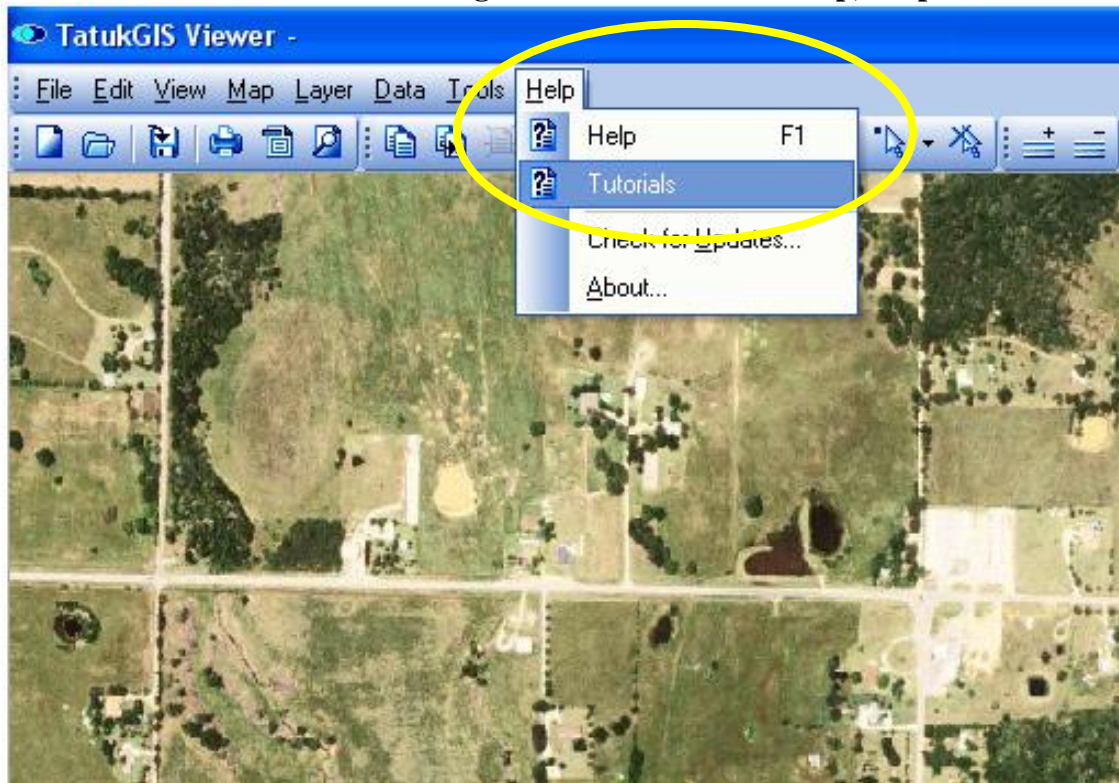

To change the program language select View, Language, and one of the options.

To print a map select File, Print Preview or Print to PDF. Enter the title and print.

For additional instructions on using the software click on Help, Help or Tutorials.
